SKIN CANCER LASER CENTRE — Systems Architecture

HotDoc · Helix · Tyro · Stripe · Website | prepared by SnailAI.AI for Dr Andrew Li & Omid Zarbaft

v1.1 · 11 OCT 2026

Key principle: Helix is the single source of truth. Practitioners, rosters and appointment types are configured in **Helix** → synced to HotDoc via cloud integration (access key delivered 1 Oct, installation complete 6 Oct) → the website displays HotDoc's booking UI via iframe. Change rosters in **Helix**, never in HotDoc. Patients can book from **4 entries**: clinic website widget · HotDoc web directory · HotDoc app · front desk — all land in the same Helix appointment book.

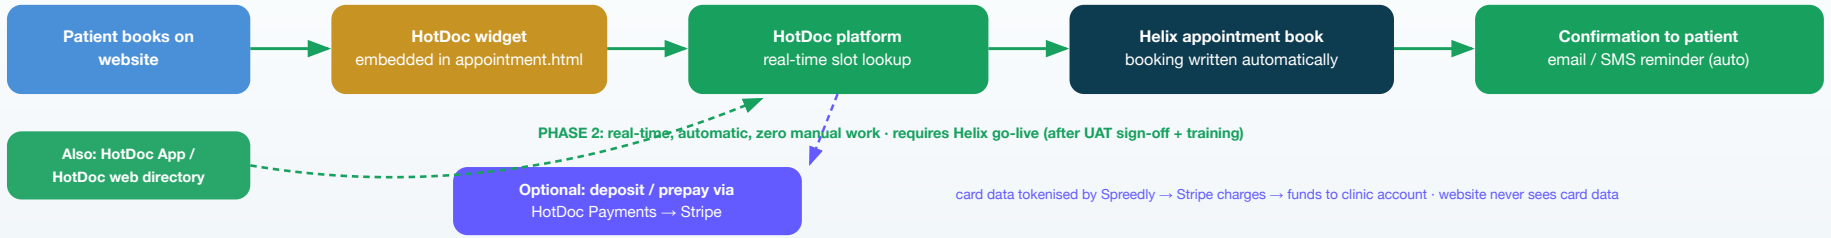

Business Flows — Appointments & Refunds

Two booking phases (temp system → HotDoc) + payment & refund paths

A. Booking flow — PHASE 1 (now → Helix go-live)

B. Booking flow — PHASE 2 (from Helix go-live)

C. Payment & refund paths

Scenario	Where money moves	Flow	Refund path
Card at front desk (most visits)	Tyro EFTPOS → clinic bank a/c	Reception charges card via Helix-integrated terminal (Tyro); Medicare Easyclaim rebate can be returned to patient's card on the spot	Reception processes refund on the same Tyro terminal via Helix billing — receipt reversed in Helix
Online deposit / prepay (optional, later)	HotDoc Payments → Stripe → clinic bank a/c	Patient adds card when booking (tokenised); charge triggered per clinic's rules (deposit on booking or after visit via "Collect")	Refunded from HotDoc Dashboard (Payments section) back to the same card; token redacted if card removed. Bank statement shows clinic descriptor
Medicare rebate	Medicare → patient	In-clinic: Tyro Easyclaim (instant, ~11 s). Online-paid: clinic submits claim, rebate goes to patient's Medicare bank account	N/A (Medicare-side process)
No-show / late cancel (optional policy)	HotDoc Payments (pre-auth)	If enabled, funds pre-authorised (held) for chosen appointment types; clinic charges the held amount on no-show/late cancellation	Simply release (void) the pre-authorisation in HotDoc Dashboard — no money ever moved

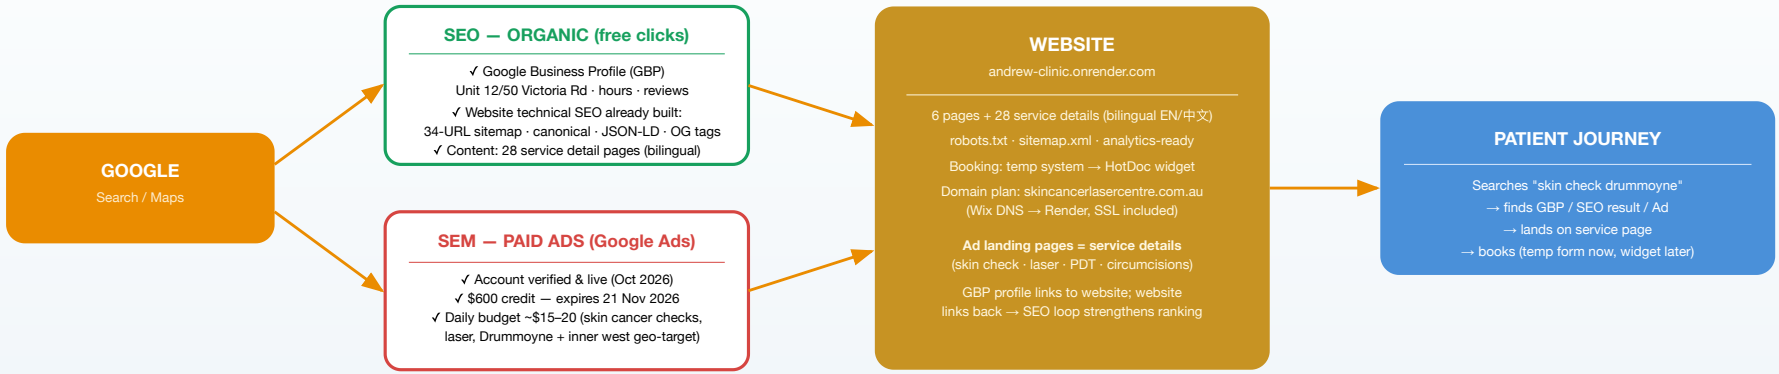

Who can do what: Helix billing/Tyro refunds — **Omid** (Practice Manager, OZ001). HotDoc Payments refunds & settings — **Robin or Andrew** (Dashboard admins). Tyro terminal pairing — done with Tyro/Telstra at go-live.

Marketing Structure (Google) + System Ownership

How patients find the clinic online · who owns which system

PAGE 3

A. Google marketing structure — SEO (organic) vs SEM (paid ads)

SEO vs SEM in one line: SEO = making the website/GBP rank naturally (built already, ongoing content). SEM = paying Google for top placement (Google Ads, budget capped, $600 credit until 21 Nov 2026). Both funnel into the same service pages → booking.

B. System ownership & status board

System	Purpose	Login (who)	Status (11 Oct 2026)	Next step
Helix Telstra Health	Clinical records, rosters, appointment types, billing — **source of truth**	sclc.helix.medicaldirector.com admin / AL001 (Dr Li) / OZ001 (Omid)	**UAT READY** config validated 10 Oct; accounts/fee schedules/books all correct	Training session with Jesse (awaiting time) → sign-off → Training Phase → go-live. Then: skin-cancer appointment types + NASH cert mount + Tyro surcharge
HotDoc online bookings	Patient booking platform + SMS reminders; synced with Helix	dashboard.hotdoc.com.au qf14@hotmail.com / info@ + robin@snailai.ai (admins)	**READY** account activated 10 Oct; installation complete 6 Oct; widget code generated & archived	Widget embeds into website on Helix go-live day (checklist ready). SMS reminders included in $199/mo plan
Temp booking (SnailAI built)	Interim booking while Helix not live	Part of website (Robin manages)	**LIVE — IN USE** handling all real bookings until go-live	Retire 1–2 weeks after HotDoc widget is stable
Tyro in-clinic EFTPOS	Front-desk card payments + Medicare Easyclaim on terminal, paired to Helix	Application via Andrew Beard (abeard@tyro.com); support case #03855752	**APPLICATION UNDERWAY** 5–7 business days after documents complete; 5 of 7 questionnaire items answered	Andrew replies to Mr Beard's email → approval → terminal arrives → pair with Helix at go-live (needs surcharge set first)
Stripe via HotDoc Payments	Online deposits / prepayments / no-show fees	Signup inside HotDoc Dashboard → Payments → Setup Payment Provider	**NOT YET STARTED** optional feature — commercial decision	Planned: set up during iMac on-site visit (with Package A setup). 10-minute guided form: ABN + bank account + descriptor
Website SnailAI built	Clinic front door: services, doctors, booking entry, SEO	Render + GitHub (AndrewSkinClinic org); Andrew has Web Editor account for text/price edits	**LIVE** v3.12.x · bilingual · 34-URL SEO foundation · Google Ads verified	Widget embed at go-live; domain switch to skincancerlasercentre.com.au when ready
